

**TRANSFORMING WASTE
BIOMASS MATERIAL
INTO NEXT GENERATION
BIOMASS FUELS**

January 2023

IMPORTANT NOTE

The information contained in this document (the presentation") and the presentation made to you verbally has been prepared by Active Energy Group plc (the "Company"). The Company is a UK company quoted on AIM, a market operated by London Stock Exchange plc. This Presentation has not been fully verified and is subject to material updating, revision and further verification and amendment without notice. This Presentation has not been approved by an authorized person in accordance with Section 21 of the Financial Services and Markets Act 2000 (as amended) ("FSMA") and therefore it is being provided for information purposes only.

While the information contained herein has been prepared in good faith, neither the Company nor any of its directors, officers, agents, employees or advisers give, have given or have authority to give, any representations or warranties (express or implied) as to, or in relation to, the accuracy, reliability or completeness of the information in this Presentation, or any revision thereof, or of any other written or oral information made or to be made available to any interested party or its advisers (all such information being referred to as "Information") and liability therefore is expressly disclaimed. Accordingly, neither the Company nor any of its directors, officers, agents, employees or advisers take any responsibility for, or will accept any liability whether direct or indirect, express or implied, contractual, tortious, statutory or otherwise, in respect of, the accuracy or completeness of the Information or for any of the opinions contained herein or for any errors, omissions or misstatements or for any loss, howsoever arising, from the use of this Presentation.

The views of the Company's management/directors and/or its partners set out in this document could ultimately prove to be incorrect. No warranty, express or implied, is given by the presentation of these figures herein and investors should place no reliance on the Company's estimates cited in this document.

This Presentation may contain "forward-looking statements" that involve substantial risks and uncertainties, and actual results and developments may differ materially from those expressed or implied by these statements. These forward-looking statements are statements regarding the Company's intentions, beliefs or current expectations concerning, among other things, the Company's results of operations, performance, financial condition, prospects, growth, strategies and the industry in which the Company operates. By their nature, forward-looking statements involve risks and uncertainties because they relate to events and depend on circumstances that may or may not occur in the future. These forward-looking statements are not guarantees of future performance of the Company and reflect assumptions and subjective judgements by the Company that are difficult to predict, qualify and/or quantify. These forward-looking statements speak only as of the date of this Presentation and the Company does not undertake any obligation to publicly release any revisions to these forward-looking statements to reflect events or circumstances after the date of this Presentation.

This Presentation should not be considered as the giving of investment advice by the Company or any of its directors, officers, agents, employees or advisers. In particular, this Presentation does not constitute or form part of any offer or invitation to subscribe for or purchase any securities and neither this Presentation nor anything contained herein shall form the basis of any contract or commitment whatsoever. No reliance may be placed for any purpose whatsoever on the information or opinions contained in these slides or the Presentation or on the completeness, accuracy or fairness thereof. In particular, any estimates or projections or opinions contained herein necessarily involve significant elements of subjective judgment, analysis and assumptions and each recipient should satisfy itself in relation to such matters.

The distribution of this document in or to persons subject to jurisdictions outside the UK may be restricted by law and persons into whose possession this document comes should inform themselves about, and observe, any such restrictions. Any failure to comply with these restrictions may constitute a violation of the laws of the relevant jurisdiction.

Image Disclaimer. All images used are for illustrative purposes only and have either been sourced through the Company's image library or other sources.

Allenby Capital Limited ("Allenby Capital"), which is authorized and regulated by the Financial Conduct Authority, is acting as the nominated adviser and broker to the Company. Accordingly, the recipients should note that Allenby Capital is neither advising nor treating as a client any other person and will not be responsible to anyone other than the Company for providing the protections afforded to clients of Allenby Capital and nor for providing advice in relation to the matters contained in this Presentation.

About Active Energy Group

- Active Energy produces a superior biomass pellet:
 - in terms of heating values;
 - improved its ability to co-fire with coal at existing power facilities; and
 - improved environmental credentials
- Active Energy focuses on utilizing low value waste residuals as the core feedstock for **CoalSwitch®**
- Huge market opportunity in various industries to utilize Active Energy's **CoalSwitch®** to meet current and future environmental regulations without capital expenditure at current plants
- Active Energy is working on all options to increase production levels in North America either through both large scale to smaller scale joint venture projects

- **It is a better pellet. *Period.***
 - Higher heating value than current white pellet production
 - Proven hydrophobic qualities
 - Handles and burns much like coal only cleaner
- **Exclusive use of low value waste feedstock**
 - Boosts lifecycle analysis values, reduces negative perception/reputation
 - **CoalSwitch®** pellet fuel meets established sustainability standards
 - Used low-value waste residuals in first production
- **Extensive Testing Program shows consistent burn test results**
 - **CoalSwitch®** has been tested for its proprietary qualities as a biomass fuel and for its co-firing performance with coal.
 - Prospective customers own testing confirms reduced emissions levels.

Source: AEG

- **Proven production process for next generation pellets**
 - Reference plant constructed and operated in 2021
- **Successfully produced test volumes and delivered to customers**
 - In 2021 and through 2022 fuel delivered to program partners and future customers in US and internationally.
- **Production technology patents awarded**
 - First round patents already obtained in US & Canada, and South-East Asia
- **A revised plant with new reactors for increased production is now in the final stages of development and construction by our engineering partner, Player Design, Inc.**

AEG only utilizes forestry and lumbermill residuals – already proven in Maine

**COALSWITCH®
COMPETITIVE
USE
ADVANTAGE**

Forestry economics support sustainable sourcing

- Cutting down trees purely for biomass is not economic nor sustainable
- Commercial forest management is well regulated and controlled

Sawlogs are the primary economic driver for commercial forestry

- We utilize their residuals, reducing waste and driving additional revenues

Biomass generation should use all low-grade residuals

- Forest sourced thinnings, branches, tops and other low-grade wood
- Sawdust and chips from wood processing plants

Sustainability - the vital component in future biomass production

BYU: Test Furnace - Source: AEG

***Our Market
Opportunity***

- **Companies are facing regulations to reduce or eliminate CO₂ emissions from operations**
 - US EPA regulates CO₂ emissions across many sectors
 - IRA has introduced emissions reductions circa 40%
- **Companies are voluntarily choosing to reduce or eliminate CO₂ emissions from operations**
 - 20% of the world's 2000 largest companies have NET ZERO declarations
- **Many of these hard-to-decarbonize industries turn to costly (and unproven) carbon capture technologies and/or costly carbon offsets**
 - Value of carbon offsets doubled between 2019 - 2020

U.S. coal consumption by major end users, 1950-2021

million short tons

Data source: U.S. Energy Information Administration, *Monthly Energy Review*, Table 6.2, May 2022, preliminary data for 2021

 Note: Coke plants are industrial coking coal plants; other industrial includes all other, non-coking coal industry use.

TRENDS:

- Coal will remain a key component of fuel supply in near/medium term
- Heavy industry/power generators under pressure to reduce emissions
- Tough decisions ahead between shut down Vs expensive Capex to introduce cleaner technologies
- Estimates show 7% of capacity scheduled to close by 2025*

*Source: Reuters

- AEG has established an active program to co-fire test coal and **CoalSwitch®**
- **CoalSwitch®** can be co-fired with immediate environmental and emissions benefits - **Proven**
- **CoalSwitch®** can be handled in power generation facilities with limited to zero cap ex required for reconfiguration
- **CoalSwitch®** provides opportunity to extend life of current coal plants and meet increasing and immediate environmental regulations.

	PERFORMANCE IMPACT OF CO-FIRING (75% COAL / 25% COALSWITCH®)
Calorific Value: (BTU/lb)	Only a 7% drop from normal heating values
ASH CONTENT %:	Significant reduction of ash deposits - up to 77%
Grindability – use on bowl mill facilities	FULLY TESTED No degradation in bowl mill performance - lower energy consumption use
SOx / NOx Emissions	DRASTIC REDUCTIONS in both Sulfur Dioxide and Nitrogen Oxide emissions
Emissions	18% Improvement in emissions values

**Power
Generation**

Steel

CONSUMERS & SMALL BUSINESSES

Retail Sales

How are we marketing CoalSwitch®?

- AEG is in active sales discussions with companies (both large & SME) in each of these sectors.
- Established process to deliver smaller quantities at outset, testing in a facility and then leading to long term supply contracts.
- Focused on future customers both internationally and establishing use in North America
- Targeting customers and industries with a corporate commitment for ESG
- Identifying customers that would benefit from seamless change from white pellets to black pellets

Our Approach

Key partners in Maine:

Ashland Facility, 2022

Ashland: Integrated with established infrastructure

First production volumes scheduled for Q1 2023

- **FSC® Chain of Custody (CoC) and Controlled Wood certifications - May 2022**

- Confirms production of **CoalSwitch®** will use forest-based materials from responsible sources and that the Company's suppliers have committed to the strictest standards currently governing forest management.
- Is the basic market prerequisite to permit biomass products to be sold into all of Active Energy's target markets.
- FSC® certification will support customers' corporate Environmental, Social and Governance (ESG) agendas.

- **Independent LifeCycle Analysis - July 2022**

- Shows **CoalSwitch®** reduces overall (lifecycle) emissions:
 - significant reduction in emissions compared to coal and;
 - significant reduction in emissions compared to natural gas

These two criteria already completed for future CoalSwitch® production in Maine

Providing long term licence and partnership revenues to AEG

- **AEG is focused on speed to market to scale up production levels**
- **AEG will focus on proprietary plants, with an initial optimum size of 100,000 tons per annum**
- **In addition, focus is on small scale CoalSwitch® production facilities which will encourage:**
 - Local production partners
 - Clusters of plants to benefit specific local opportunities
 - Simplify & reduce logistics costs
- **Joint Venture can provide immediate benefits:**
 - Accelerating production using existing sites & waste materials from these sites
 - Reducing Capex to establish **CoalSwitch®** production
 - Reducing on-going logistics costs

Opportunities for AEG in USA

- Ashland presents the first commercial production centre for **CoalSwitch®**
- Breathes life into rural areas previously reliant on the lumber, pulp and paper industries
- New England, Pacific Northwest and Gulf Coast are regions of prime interest for future AEG expansion plans

Market and Illustrative Financial Information

Industrial wood pellet spot prices at a glance as at Nov 2022

Industrial wood pellet index – Price activity in 2022

Pricing factors for CoalSwitch®

- **CoalSwitch®** should have a premium to current pellet pricing
- Pricing strengths for **CoalSwitch®**
 - More GJ per tonne
 - Less ash deposition in co-firing
 - Higher bulk density
 - lower transportation costs per tonne
 - Emissions benefits in co-firing

Pricing and feedstock supplies remain key issues for winter 2022/23

100% Owned 100,000 ton per annum Plant Capex

Investment Requirement	\$'000
Permitting, Design & Engineering	\$3,250
Equipment Cost incl. Dryer & Reactors	\$21,250
Contingency	\$3,500
TOTAL	\$28,000 *

* ROI expected within 5 years

Typical Plant Development Cycle

Construction and commissioning of Plants expected to average 15-18 months

Fully Operational 100% Owned Plant *

Average ROCE 29%

*Assumed sale price of \$300p/t

JV Economic Benefits

- Speed to building operating plant**
 - Use of existing sites and waste materials
 - Use of JV partners existing relationships for permitting
- Feedstock availability and pricing**
- Reduced Capex reflecting site availability**
- Reduced logistics costs**
- Long term license revenue stream for AEG**

Improved ROCE to 33%

Huge opportunity to utilize Active Energy's CoalSwitch® to meet future energy needs
